

LS Series Interceptors

LS Series

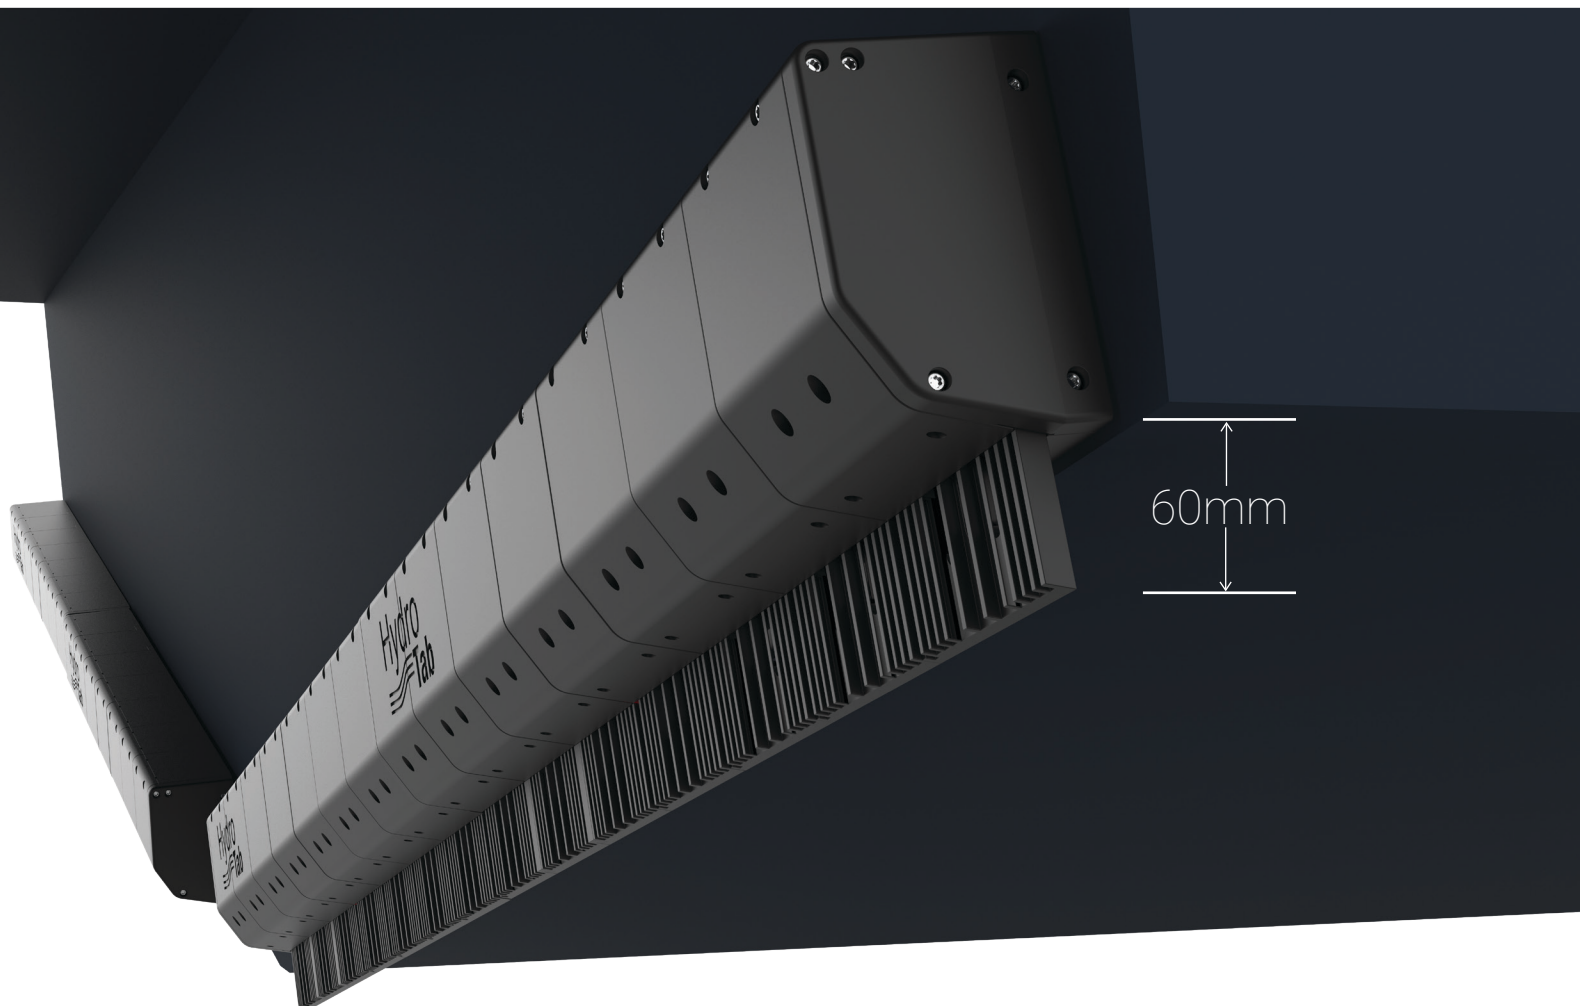

60mm stroke, custom length

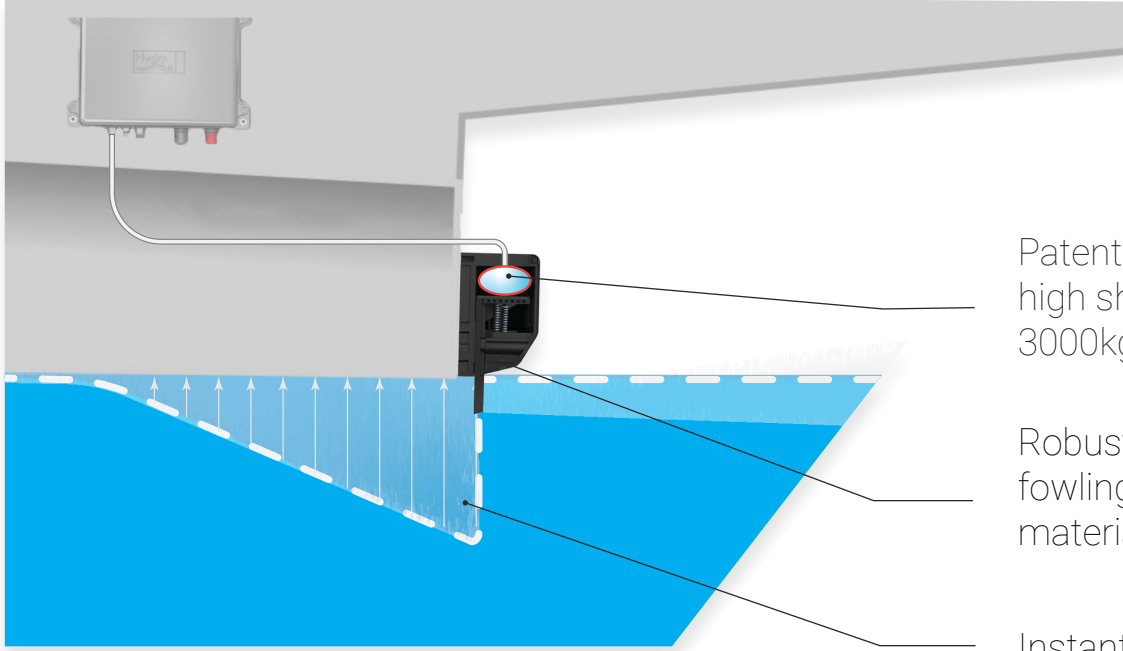

Hydrotab proudly presents the brand new LS Series interceptors made from composite material, with an extended stroke for improved efficiency.

Patented

60mm Stroke

The LS Series has a 60mm blade stroke, providing unparallel efficiency and instant trimming response that will transform your boat ride experience

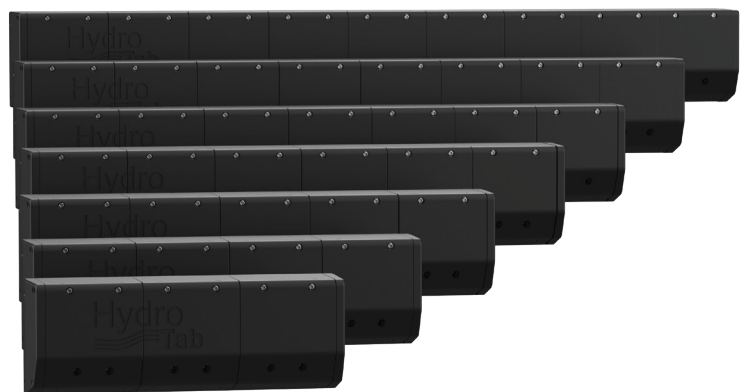

Patented technology with high shifting forces up to 3000kg

Robust, lightweight build with fowling resistant composite material

Instant lift effect

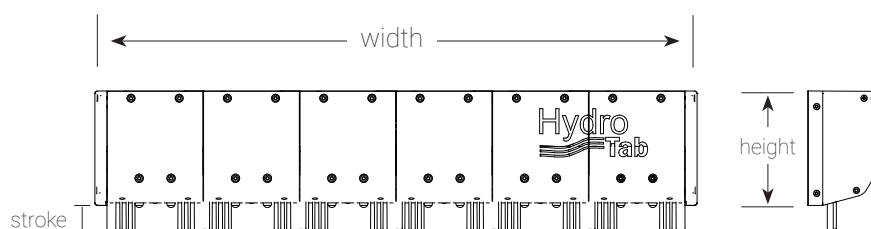

Many size options

The LS Series Interceptors can be custom-made to any desirable length, making them extremely versatile for any and all projects.

Technical data

Model	Length (mm)	Width (mm)	Height (mm)	Max Deployment (mm)
480LS	520	120	190	60
640LS	680	120	190	60
800LS	840	120	190	60
960LS	1000	120	190	60
1120LS	1180	120	190	60
1280LS	1320	120	190	60
1440LS	1480	120	190	60

Moby Controller

Ultrathin wide screen joystick automatic controller

HydroTab Innovates once more presenting Moby. The new ultrathin, wide screen, joystick automatic controller for HydroTab trim tabs interceptors. Designed and manufactured to get the full potential out of your HydroTab interceptors, optimize your boat cruising experience and save fuel.

True NMEA2K system
no extra cables

Steering Assistance

Auto Roll and Auto
Trim functions

Easy-to-navigate menu

Built-in 10Hz GPS

Large 3.2" TFT
Intelligent Display

Built-in 3D Gyro and
3D Accelerometer

Fully or light loaded
selection function

Auto Diagnostics

Operating modes

- Full automated Trim & Stability Control
- Auto pitch
- Manual control

Slim Design
Blends with any Dashboard

10mm

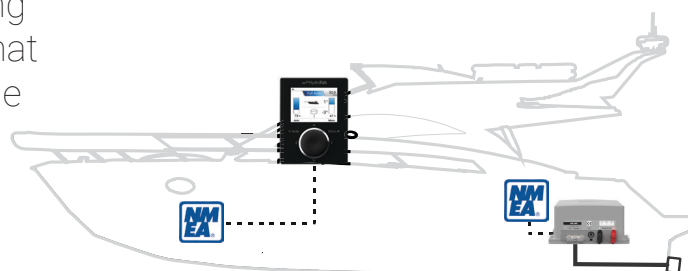

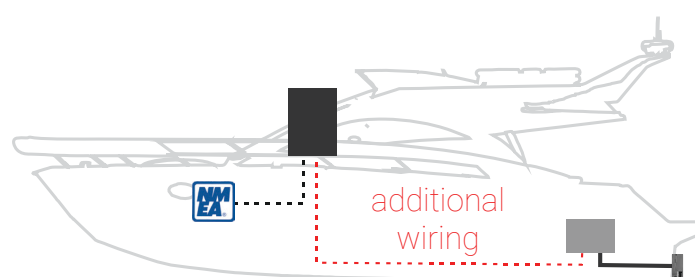

- Ultra thin minimal design that blends with any panel and dashboard
- New innovative joystick system IP68 with no moving parts. Ideal use for waterjet equipped boat
- New streamlined intuitive GUI (Graphic User Interface)
- Scratch proof, antireflective screen
- Direct NMEA 2000 backbone installation.
- No need for extra wiring
- Wide, crisp 3,5 inch color screen
- Complete system with integrated-IMU-GPS-Antenna
- Easy data exchange for custom-dashboard applications

A true NMEA product

Unlike similar products that require extra wiring, the Moby controller and the corresponding AirUnit are two independent NMEA devices that connect to an existing network, simplifying the installation.

3DHC Controller

Ergonomic, manual control of Trim & Roll

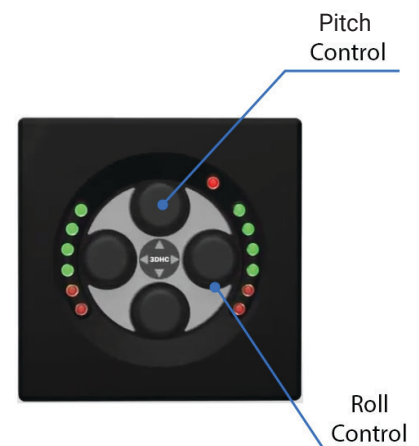

- User friendly operation
- Position indication
- Optimized position storage
- Auto Retraction on engine switch off
- Emergency retraction
- Ergonomic design
- Day & Night function

Easy control of your boat

The 3DHC controller allows complete control of your boat trimming with the simple push of a button, by controlling both interceptors dynamically!

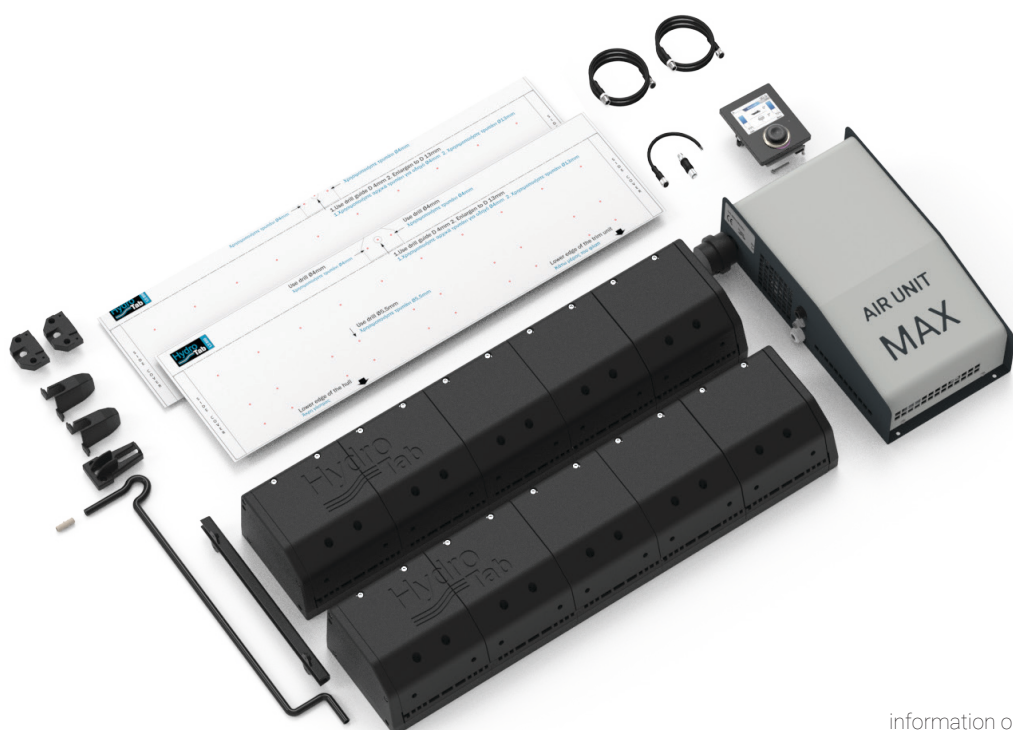

Control trim and list of the boat, and make control even easier by using 3DHC's additional attributes: Position LED Indicators, position memory storage and auto-Retracton

Ideal for any project

Control your boat in style by choosing one of the different control option that better suit you. Hydrotab offers a wide range of control solution from basic affordable rocker switches to the high performance, sophisticated Moby Automatic NMEA controller. We provide the ideal solution for any of your needs!

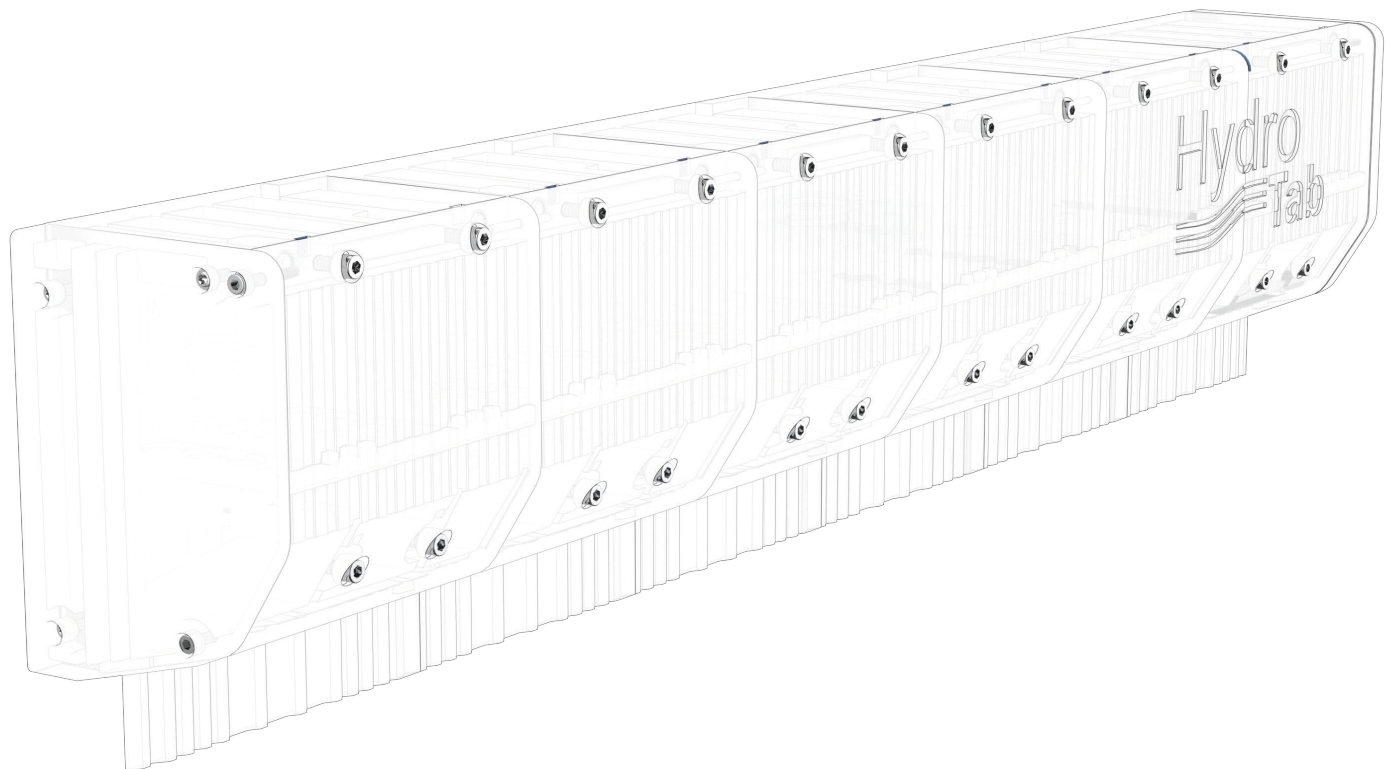

All-in-one package

Choose the perfect system for you, with an all-in-the-box convenient package that comes with anything you need to install and operate the interceptor system!
